Locale and Global Scope

Global Scope

X = 5 # variable X in Global Scope

def func1(x): # local variable x declared as parameter

Local Scope

 y = 10 # local variable declared inside scope of func1()

def func2(x): # local variable x declared as parameter

Local Scope

 z = 10 # local variable declared inside scope of func1()

Variable declared inside function or as function parameter are not accssible here

Scope in nested function

Global Scope

`x = 5` `# variable X in Global Scope`

`def func1(x):` `# local variable x declared as parameter`

Local Scope

`y = 10` `# local variable declared inside scope of func1()`

`def func2(y):`

Local Scope

`z = 15`

End
